## RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

**Activity:** Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

**Total Points:** 100

| Criteria                                   | Excellent (100%)                                                                                              | Proficient (75%)                                                                          | Developing (50%)                                                         | Incomplete (0%)                                    | Score |
|--------------------------------------------|---------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|----------------------------------------------------|-------|
| <b>VM Type &amp; Version (10 pts)</b>      | Correctly selects <b>Ubuntu (64-bit)</b> as the OS type and version. Matches the downloaded ISO architecture. | Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works. | Selects wrong OS type entirely (e.g., "Other Linux") — needs correction. | Fails to select any valid OS type; cannot proceed. | /10   |
| <b>Memory (RAM) Allocation (15 pts)</b>    | Allocates 4-8GB RAM as required. Understands the host system limitation.                                      | Allocates 3GB – 3.5GB (sufficient but slightly below requirement).                        | Allocates 2GB or less — causes severe lag or installation failure.       | Allocates no RAM or invalid value.                 | /15   |
| <b>Processor (CPU) Allocation (15 pts)</b> | Allocates <b>4 CPU cores</b> with <b>100% execution cap.</b> Enables PAE/NX if available.                     | Allocates 2 cores but does not adjust execution cap or nested VT x settings.              | Allocates only 1 core — installation takes extremely long.               | Fails to configure processor settings.             | /15   |

|                                                 |                                                                                                    |                                                                              |                                                               |                                         |     |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|---------------------------------------------------------------|-----------------------------------------|-----|
| <b>Hard Drive (Storage) Setup (20 pts)</b>      | Allocates <b>100 GB dynamically allocated storage</b> (or fixed). Created a partitioning in drive. | Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional. | Allocates less than 20GB — insufficient for installation.     | No hard drive created; VM cannot boot.  | /20 |
| <b>ISO Attachment &amp; Boot Order (15 pts)</b> | Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot                          | Attaches ISO but forgets to adjust boot order — manually boots               | Attaches ISO but boot order wrong — VM boots to blank screen. | Fails to attach ISO; VM cannot install. | /15 |

|                                               |                                                                                                                                     |                                                                                     |                                                                                        |                                        |     |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|----------------------------------------|-----|
|                                               | order: <b>Optical</b> → <b>Hard Disk</b> .                                                                                          | via "Force BIOS" first time.                                                        |                                                                                        |                                        |     |
| <b>Proper Installation Execution (25 pts)</b> | Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI. | Completes installation but makes minor errors (e.g., wrong timezone — fixes later). | Installation starts but fails midway (partitioning error, corrupt ISO, or power loss). | Installation not attempted or aborted. | /25 |

**TOTAL SCORE: \_\_\_\_ / 100**

#### **DOCUMENTATION REQUIREMENT**

**Student Name:** Geisler A. Borquillo\_\_\_\_\_

**Date:** 8/26/26\_\_\_\_\_

**VM Name:** BorquilloElective3\_\_\_\_\_

#### **1. VM Specifications Summary**

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM \_6\_\_ GB (6832 MB) CPU Cores \_4\_\_

Hard Drive Size \_116\_\_ GB (Dynamic / Fixed) Storage Controller

SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu-26.04-desktop-arm64.iso

## **2. Step-by-Step Setup Process**

*(Describe what you did, in order. Include commands used, if any.)*

1. Named my vm to BorquilloElective3
2. Changed the version to ubuntu(64bit)
3. Made a username and password in unattended install
4. Set the base memory to 6832 and set the cores to 4
5. Set the hard disk to 116
6. Configured the ubuntu
7. Logged in in ubuntu
8. Opened the terminal

## **3. Issues Encountered & Resolutions**

*(List any problems during setup and how you fixed them.)*

|                                                                                                |                                                                                                        |
|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| <p>Issue</p> <p>Automatic pc shutdown</p> <p>Encountered a corrupted iso of ubuntu desktop</p> | <p>Solution</p> <p>Opened the pc</p> <p>Moved my iso of ubuntu desktop in my flash drive to the pc</p> |
|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
